

Picea mariana

Black Spruce

An evergreen conifer with a narrow conical, spire-like form. Extremely cold hardy and a valuable nesting site for birds. Slow-growing. Beautiful dark green color stands out in the winter landscape, and contrasts well with bright autumn leaves. Not especially heat and drought tolerant, so be sure to place in a protected site. Also sensitive to salt and pollution.

Suggested Companions: red maple (*Acer rubrum*), yellow birch (*Betula alleghaniensis*), wild raisin (*Viburnum cassinoides*), purple chokeberry (*Aronia melanocarpa*)
